| Functional Testing (Library Construction, RNA) | Pass |
| Each set of reagents is functionally validated and compared to the previous lot | |
| through construction of libraries made from commercially available RNA, using the | |
| kit's minimum and maximum input requirements. Libraries made from the previous and | |
| current lots for both input RNA amounts are sequenced together on the same Illumina | |
| flow cell and compared across various metrics including library yield, individual | |
| transcript abundance correlations (low vs. high input, old lot vs. new lot), 5'-3' | |
| transcript coverage, and fraction of reads mapping to a reference. | |
